

AMENDMENTS TO THE SPECIFICATION

Please replace the previous Abstract of the Disclosure with the following new Abstract of the Disclosure:

A method for generating a superset pinout for a family of devices. First, a pinlist is defined for each device within the family of devices. Second, a superset listing of pins is generated from the pinlist. Third, the superset pinout for the family of devices is created from said superset listing of pins to eliminate potential footprint variations within the family of devices. Fourth, each pin of the superset pinout associated with each member of the family of devices is marked.
